DETAILED ACTION

1. This application has been examined.
2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-18 are rejected under 35 U.S.C. 102(e) as being anticipated by Liu (2003/0164780).

4. Regarding claim 1, Liu shows:

a method for a portable electronic apparatus to output audiovisual (AV) signals (Figure 1) comprising: (a) selecting the source of the AV signals to be output by the portable electronic apparatus (Figure 2, para 4, 11); and (b) outputting the AV signals generated by the portable electronic apparatus or the AV signals externally input to the portable

electronic apparatus according to the selection made in step (a) (Figures 2, para 11, 12).

5. Regarding claim 2, note turning on the portable electronic apparatus (implicit, para 4).

6. Regarding claim 3, note turning on an operating system (OS) in the case the portable electronic apparatus selects to output the AV signals generated by itself in step (a) (see for example para 5 and the embodiment in para 12)

7. Regarding claim 4, in addition to that mentioned for claim 1, note the display and processor (para 11). Also, note a selecting module electrically connected to the processor for selecting whether the portable electronic apparatus outputs the AV signals generated by the AV signal generator or the external AV signals received via the receiving port (para 12, 13).

8. Regarding claim 5, note the memory for storing an operating system (OS) (para 11, also implicit in the notebook computer).

9. Regarding claim 6, the AV signals include video signals, and the AV signal display device is a thin film transistor liquid crystal displayer (TFT LCD) (para 11).

10. Regarding claim 7, the TFT LCD comprises a low-voltage differential signal (LVDS) receiver for receiving video signals in the AV signals received by the TFT LCD (see para 11 and note the receiver. This implicitly has the low voltage differential signal receiver).

11. Regarding claim 8, the AV signals include audio signals, and the AV signal display device is a speaker (para 11).

12. Regarding claim 9, note the amplifier (para 11).

13. Regarding claim 10, the device is a notebook (para 3).

14. Claims 11-17 show the same features as claims 4-10 respectively and are rejected for the same reasons.

15. Regarding claim 18, the program code is stored in a basic input-output system (BIOS) of the non-volatile memory (para 12).
